## SUPPLIER'S MARKETPLACE

### **Packaging Innovation**

Polypack introduces a new way to package tubes. The odd shapes and sizes of tubes have always been a challenge to package. The company has developed a system that inverts and packages tubes for distribution. Polypack's tube series machines are fully automatic, offset-inline, shrink multi-packing systems designed specifically for tubed products. The Tube 90 and Tube 180 consist of a single or dual lane infeed/collator with a single or dual lane wrapper/tunnel. The packaging systems save money, space and simplify product storage. These systems are extremely versatile, easy to operate, and highly reliable.
