PACKAGING

Wrap It Up

By JOANNA COSGROVE

Speed and versatility are paramount to getting the job done efficiently

Polypack Inc., Tampa Bay, Fla., offers two wrapping solutions for the beverage segment: the ILB24L-P and the Cha Cha Cha Shrink Bundler. The ILB24L-P is described as a versatile shrink-wrap solution for multipacks that bundles/wraps any configuration of bottles, boxes and odd shaped articles. The unit's no transfer wrapping also allows unstable product multipacks to be produced. In a single lane configuration, the unit boasts production speeds up to 50 wraps per minute. In a double lane configuration, the unit can complete up to 100 wraps per minute.

Polypack's Cha Cha Cha print registered shrink bundler is touted as one of the most affordable shrink bundlers capable of running print registered film. The compact unit uses either single or double rolls of film (clear or print registered) with film repetitions up to 40 inches in length and provides the versatility to run a wide range of products. The Cha Cha Cha's small footprint is complemented by electro-mechanical motions and is controlled by three-phase motors and inverters or by servos. No air or vacuum is required for operation.

With a compact stainless steel design, the versatile Cha Cha Cha processes 60 bundles per minutes with no seal bar and a user-friendly color touchscreen. BI
