PACKAGING

Zipper shrinkfilm

Film Source International introduced Easy-Open shrinkfilm for multi-packs. The zipper design on top of the multi-pack is perforated during the shrinking process. The Easy-Open perforation system highlighted by the zipper design is visible to customers as it offers an easier way to tear apart the film. The Easy-Open shrinkfilm multi-packs provide a versatile design for any configuration, including cans, bottles and trays. Film Source International's shrinkfilms are produced based on the specific requirements of individual customers. Every run is tested for visual and physical properties, color accuracy, shrinkability, clarity, strength and sealability.
