

Shrink Wrap Solution

Tampa Bay, FL based Polypack, Inc has introduced a new shrink wrap solution for multipacks. The ILB24L-P is a versatile shrink-wrap bundler that the company says will wrap any configuration of bottles, boxes, and odd-shaped articles. Running at speeds of up to 30 wraps per minute in single lane configuration or up to 80 wraps per minute in dual lane, the ILB24L-P employs no-transfer wrapping so stability is not a concern. Heavy gauge stainless steel construction provides strength, rigidity and cleanliness with minimal maintenance. Engineered as a complete unit, the ILB24L-P incorporates a double insulated tunnel that reduces energy consumption.
