

Shrinkwrapping innovations

Polypack Inc. showed off several of its packaging machines,

including the Tango 24 Shrink Wrapper. The machine is an inexpensive, compact, print-registered shrink bundler that offers versatility with three interchangeable infeeds. The Tango 24 is available with an inline infeed, inline flood infeed, side infeed or flight bar infeed. The modules can be changed in less than 10 minutes.

The company also offered its Nested Packs, which use staggered rows to create dense packs that eliminate the need for corrugate. Nesting allows for increased product quantity in the same footprint as traditional bundles. The Polypack fully integrated HandleWrap provides a snag-free carrying handle. The handle remains inside the pack until the consumer pulls it out, and is made from high-tensile film. It can be made from clear, colored or random-pattern printed film.
