Polypack, Inc. has been a leading manufacturer of shrink packaging equipment for over 50 years. Polypack's shrink packaging equipment and tray wrappers are built with the best materials and components available to deliver long service life, high efficiency, durability and reliability.

Our product line encompasses a diverse range of packaging equipment. These designs include total closure forming head shrink wrappers (horizontal, form, fill and seal), high speed sleeve wrappers (bullseye), print registered film wrappers, fully automatic tray loader/formers, label orientation machines, and robotic pick and place equipment such as our patented ROKH system. All our shrink wrappers and end-of-line packaging equipment is engineered to shrink wrap products of various shapes and sizes, individually or in multipack configurations; either unsupported, tray or pad supported. In addition, Polypack offers a complete line of semi-automatic and fully-automatic stretch wrappers to complete your end-of-line packaging needs.

Polypack's shrink packaging systems are designed to lower your packaging costs through source reduction. We offer several innovative packaging solutions that can drastically reduce, or even completely eliminate the use of expensive corrugated material. The end result is rapid payback and continued material savings for many years to come.

You'll retire before your Polypack does. ●●●●

SHRINK & STRETCH EQUIPMENT

It's on your shoulders to find the right machine for the job. But what happens when your product line evolves and your Shrink & Stretch Equipment becomes obsolete? With a Polypack, you'll never have that problem. We use an innovative, modular design capable of answering today's production challenges - and tomorrow's. What's more, every Polypack is built using only the best materials and components for decades of efficient performance with minimal maintenance and repair headaches. Polypack. Truly smart.
