PICK & PLACE ROBOTIC INFEEDES

Patented ROKH System

The ROKH system's robotic arm picks up products from an infeed conveyor at any angle, and places the products directly onto the shrink film. During this process the products can be split, stacked, rotated and collated into any desired configuration. The robotic arm uses interchangeable grippers to give it the versatility to pick up products of various shapes and sizes

- **Intermittent or continuous motion Pick & Place loader**
- **Speed up to 50 bundles per minute!**
- **Integrated inline or into the side of a current line**
- **Products can be stacked, rotated or collated into any desired configuration**
- **Adjustable grippers to accommodate different shapes and dimension products**
